Your Jungheinrich software

for maximum customer benefits.

Efficiency

Improve the efficiency of your warehouse.

By digitising your processes, you can increase productivity from goods receipt via internal processes to order picking and goods outward.

Efficient processes

- Optimised material flow.
- High level of productivity.
- Elimination of searches.
- Inventories made easy.
- Attractive entry price.

Maximum transparency

- Storage space-specific item management.
- 99.9% inventory accuracy.
- Delivery readiness at all times.

Space-saving storage

- Increased profitability due to reduced inventory levels.
- Best possible use of space.

Easy integration

- Integration into your existing IT system landscape via a predefined interface.

Simple operation

- Fully intuitive operation thanks to modern, user-friendly interface.
- Very short training times.
- Efficient and effective work processes thanks to system support.
- 20% fewer clicks required as a result of optimised screens.

Safety

The optimal solution for maximum control.

Mapping your warehouse structure and processes in the system enables you to keep track of your inventories and orders at all times with the Jungheinrich WMS Essential – now and in the future.

Improved process reliability thanks to reduced error rates

- Accurate item management.
- Perfect warehouse overview thanks to real-time updates.
- No out-of-stock situations.
- No delivery delays.
- Fewer returns.

Always future-proof

- Flexible, functional expansions up to the fully comprehensive Jungheinrich WMS.
- Unique forward compatibility for updating or expanding the system as required.

24/7 support

- Comprehensive service and support concept.
- Efficient warehouse processes long after commissioning.
- Round-the-clock support, 365 days a year.
- Rapid response to all your requests via remote connection.

Individuality

Software as individual as your company.

Customisable standard features ensure your warehouse is more efficient, easier and less expensive to control than ever before.

Large selection of functions

- Numerous tried-and-tested, standardised functions.
- Basic version consisting of warehouse mapping, goods receipt and goods issue, inventory, master data management, control panel and host interfaces.
- Additional functions such as master data management, ABC zoning, batches and best-before dates, bypass and mixed loading devices.
- Compatible with standard warehouse technology such as racking pallet warehouses, block warehouses and shelving systems.

Unique licensing model

- Use of the Warehouse Management System in exchange for a monthly fee.
- No minimum contract period.
- One-off set-up price and monthly usage fee.
