

Services

Jungheinrich Battery service

JUNGHEINRICH

Jungheinrich Battery service.

Optimum care for lead-acid batteries.

The reliable and competent battery service from Jungheinrich will ensure that your trucks are always operating at full power. Be it battery status checks, battery servicing or optional provision of replacement and rental batteries – we will ensure flawless and trouble-free electrification of your fleet.

We will clean your batteries, extract liquids and identify any weak points, thus greatly reducing the risk to both the operator and the truck due to electric shocks or battery acid. This will save you the significant costs associated with downtime and massively extend the service life of your batteries.

And when it comes to the correct care for your batteries, our service department will provide you with comprehensive advice so that you can reliably prevent damage due to oxidation, short circuits and heat development while also eliminating the possibility of cell damage.

Service and Support all from one provider

Service and Support all from one provider.

Worldwide standards in service quality, short distances to the customer and Jungheinrich employees who do everything they can to keep your truck fleet running smoothly. So you can fully concentrate on your core business.

Original spare parts & Accessories

Original spare parts & Accessories.

Whether forklift truck or fully automated logistics system: Trust in our excellent service with original spare parts and accessories from Jungheinrich. Because only the original provides safety and maximum value retention.

All benefits at a glance:

- Safeguarding of high-performance batteries with maximum efficiency.
- Efficient prevention of repairs and downtime.
- Early detection and reduction of wear.
- Enhanced safety and greater performance.
- Consulting and manufacturer expertise from a single source.

Your Jungheinrich battery service for **maximum performance**

Safety

Best preconditions for working safely.

Action instead of reaction: Reduce risks to your employees due to potential electric shocks or escaping battery acid by opting for the preventive battery service from Jungheinrich.

Maximum operator safety

- Regular function checks to exclude risks to the operator, truck, cables and environment.
- Safeguarding of correct filling of cells to avoid battery acid in the tray due to overfilling.

Prevention of consequential damage

- Removal of battery acid or acidic dust films to avoid hazardous leakage currents.
- Prevention of oxidation, short circuits or heat development in order to avoid long-term damage.

Efficiency

Maximum performance with the most efficient service.

With regular, preventive care and maintenance of your truck fleet, you can safeguard the performance capability of your trucks in the long term. We will help you to minimise wear and ensure maximum efficiency on a daily basis.

Care, maintenance, inspection

- Early identification of malfunctions or breakages in order to reduce downtime.
- Inspection of connectors, checking for salification.

Early detection and reduction of wear

- Checking of application-specific factors, such as avoidance of overfilling, underfilling or incorrect filling.
- Consideration of natural factors, such as gassing during charging or connector wear.

Reliability

Proven quality for the utmost efficiency.

A powerful battery represents the beating heart of your electric forklift trucks. With the correct care, you will not only ensure optimum utilisation, but will also extend the service life of your batteries.

Robust battery technology for maximum performance

- Maximum reliability and high energy density thanks to robust battery technology.
- Reduced loss of performance of both the battery and the truck thanks to regular care and maintenance.

Manufacturer competence

- Use of high-quality lead-acid batteries with 24, 48 or 80 V for a wide range of applications.
- Our regular searches for hidden faults and wear will make a significant contribution to maintaining the performance of your batteries.
