

# Jungheinrich Truck Terminal

## WMT 215

### Application

Jungheinrich Truck Terminals were specifically developed for heavy-duty use on forklift trucks and in logistics. In connection with the appropriate software solution, the terminals allow a significant increase of throughput, efficiency and quality of the logistics processes, whilst lowering operating costs at the same time. Thanks to the fanless design with maintenance-free and shock-resistant components plus cold store capability to  $-30^{\circ}\text{C}$ , these terminals offer reliable service in any environment.

### Software

For optimum compatibility protection against software manipulation, the terminals are equipped with a lean, optionally write-protected Windows® 11 IoT Enterprise operating system. Jungheinrich offers the possibility of defining customer-specific software versions and settings so the devices can be used immediately "out of the box".

### Features and interfaces

The terminal offers a variety of equipment options and accessories for industrial applications. Fitted with a solid-state drive (SSD) with up to 192 GB, 8 GB RAM and the latest Windows operating system, even CPU intensive applications run smoothly. Two integrated antennas ensure an optimal WLAN connection at all times and also support the current Wi-Fi 6 standard. Numerous standardized interfaces such as USB, RS-232 and Bluetooth meet all your requirements.

### Power supply and optional battery (UPS)

Thanks to the optimal adapted power supply of 12 to 48 volts, the terminals can be supplied directly via the truck's board voltage without a converter. An optionally available battery bridges voltage interruptions or short pauses.

### Service and support

We provide all the support regarding the proper assembly and commissioning of the devices in your work environment. With service and support executed by Jungheinrich, you benefit from maximum availability and optimum performance of your devices.

### Everything from a single source

The truck terminals from Jungheinrich receive transport orders via the radio network directly from the warehouse management system and provide the employees with the required information directly at the truck.

Thanks to the holistic product portfolio, Jungheinrich offers you all the components needed for more productivity in the warehouse - from the digitalization and automation of individual processes to in-house warehouse management systems and fully integrated IT solutions from a single source.
