

Protecting warehouses and equipment

2. Services

Rack Inspection

Rack Inspections are not only legally compliant technical check-ups of racking systems according to EU standard DIN EN 15635. They also enhance warehouse safety of your employees and your goods.

Intelligent warehouse planning

We offer you integrated, intelligent warehouse planning, where racking and forklift or stacker crane work 'hand in hand' as parts of a single system. Jungheinrich can provide you with a comprehensive range of racking and storage systems, mezzanines and self-supporting stores (silos) for storing everything from pallets, containers, stillages and cartons to long loads.
