

Static small parts storage

Modular racking floor system

JUNGHEINRICH

Efficient small parts storage at all levels.

Utilise room heights and boost picking performance.

If you need to store lots of small parts, the warehouse space available is often insufficient. A modular racking floor system is recommended for this situation. It helps you make optimum use of the hall height and allows your employees to pick at multiple levels simultaneously. This increases your throughput. The multi-level system and the ability to pick at the upper levels saves you from having to use medium/high level order pickers. The steps make it easy to switch between levels. Hand pallet trucks and electric pallet trucks can be used to assist, and also forklift trucks for retrieving or removing palletted goods. The system has an extensive range of expansion and customisation options so that modular racking floor systems can be tailored to your industry, your site conditions and your performance requirements.

Racking expertise since 1958

Racking is the backbone of your warehouse. We develop tailored solutions for every industry and every demand in order to meet the utmost quality requirements and to grow along with your needs. As a system provider, we are your single point of contact from planning right through to after sales.

Certified quality. Guaranteed

Even when your racking solution is up and running, we continue to ensure quality and safety levels in the warehouse. At your request, one of our 120 certified inspectors will visit your site to perform the annual inspection stipulated by DIN EN 15635. If something is amiss, the original spare parts will be delivered right away.

All benefits at a glance

- More efficient use of room height through multiple levels
- Order picking at multiple levels for greater performance
- Short picking routes boost productivity
- Easy to assemble
- Maximum flexibility in throughput performance thanks to variable personnel deployment

Your Jungheinrich racking for maximum customer benefits.

Flexibility

Racking as individual as your business.

The modular racking floor system is suitable for a large number of goods, applications and industries. The components available and the comprehensive range of accessories allow the racking system to be customised to adapt to changes in space and utilisation requirements.

Modular functionality

- Flexible adjustment of shelving height at 25 mm increments.
- Variable adjustment to suit goods, e.g. via compartment dividers or recesses for bulk goods.
- The racking bays can be equipped to form fully encased cabinets with doors and drawers.

Individual sector solutions

- Advice from experts with sound sector experience.
- Tailored solutions for various sectors, e.g. grocery sector, wholesale, production industry and many more.

Efficiency

Everything you need for optimum material flow.

The multi-level design allows you to make intelligent use of your room's height resources. Parallel order picking at multiple levels leads to a significant increase in throughput. Your storage area grows, an increase in the number of levels is possible with prior design.

Efficient working

- Quick and direct access to all items.
- Perfect organisation and arrangement of items.
- Multiple levels enable parallel order picking.

High utilisation of space

- Multi-level design ensures the entire height of the warehouse is put to efficient use.

Safety

Best conditions for working safely.

Our preventive services and the appropriate racking accessories ensure that people, trucks and racks all stay safe – in every situation. So your processes can keep flowing and your capital goods remain protected.

Conformity with standards

- Racking systems, railings and fall protection are designed according to the applicable standards.

High process reliability

- Pallet gates provide a safe means of depositing loads on the individual levels using a forklift truck.

The right solution for your applications:
