

Jungheinrich Fleet Management System.

Upgrade your fleet with Pre-Op Check!

Pre-Op Check allows you to manage customizable checklists for visual and functional inspections and thus to reduce maintenance costs and enhance safety. So what does the Pre-Op Check module offer?

Customized checklists: Create individual checklists for visual and functional checks that provide flexible event-based (e.g. login or driver change) or time-based scheduling.

Precise segmentation: Assign checklists to specific truck segments, types or individual forklifts.

Forklift response handling: Benefit from customization options with forklift reactions for every checklist response – whether it is no reaction, crawl speed or truck lock.

Critical alert system: Stay one step ahead of potential issues with our critical response email notification feature. Receive instant notifications that enable rapid intervention and proactive maintenance, ensuring the longevity and reliability of your forklift fleet.

Powerful reporting: Use detailed reports and various filtering options to optimize fleet maintenance. Seamlessly export data to Excel for detailed analysis, enabling strategic decisions and cost-effective operations.

Multilingual: Speak your drivers' language! Adapt questions to the local language and introduce randomization in the order of answers.

Key benefits:

Increased safety: Minimize unplanned downtimes and enhance workplace safety with thorough pre-operational checks.

Reduced maintenance costs: Detect problems early, ensuring proactive maintenance and minimizing repair costs.

Operational efficiency: Streamline operations by customizing checklists and responses to your specific fleet needs.
