

System components

made easy.

Efficient logistics with the right bar code scanner.

Our robust and industry-standard bar code scanners from selected market leaders will help you to run modern warehouse operations, identifying items reliably and in real time, minimising errors and optimising your processes sustainably.

You can use manual bar code scanners to record and check items and storage locations in real time via the respective bar code every time an item is stacked or retrieved. The wireless, wired or fully automatic scanners can be individually configured and connected to your mobile IT solution.

The support of different ID systems and ranges of up to more than 10 m allow the implementation of individual solutions based on proven standard components.

All benefits at a glance

- Reliable identification of items in real time.
- Manual and automatic scanners with ranges over 10 m.
- Wired, wireless or fully automatic.
- Different ID systems can be represented.
- Individually configurable.

Your Jungheinrich bar code scanner

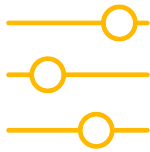

for maximum customer benefits.

Maximum output with the most efficient tools.

Identifying items in real time, preventing mix-ups and avoiding incorrect deliveries – the right bar code scanner system brings with it multiple benefits, from lower inventory costs to correct stock levels.

- Manual bar code scanner for reading bar codes.
- Also available with handheld terminals.
- Automatic bar code scanner for the fork carrier on your truck.
- Backhand or finger scanner for keeping hands free when order picking.
- Laser, camera or RFID-based readers.
- Optionally wired or wireless.
- Read ranges exceeding 10 m.
- Individually configurable.
- Different ID systems.
- Optional with automatic bar code confirmation.

A tool as individual as your business.

Benefit from customised scanner solutions for more efficiency: if your bar code scanners are individually configured according to your requirements, you will significantly reduce the error rate in your warehouse.

- Individualised solutions for customers based on proven standard components.
- Different bar code scanners, bar code types and bar code sizes possible.
- Labelling materials suitable for every need.
- Many different scanning distances can be implemented.
- Individual needs analysis.
- Consultation, setup and support from a single source.
- Personal support.

Best conditions for working safely.

Do you value safety and reliability in the warehouse? The Jungheinrich bar code scanners automatically check all order picking processes in your warehouse, ensuring that every item arrives at the correct storage location.

- Automatic checks prevent errors.
- Custom-made configurations ensure maximum process reliability.
- Optimised occupational safety due to reduced error rates.
