

Tough performer

JUNGSTARS are Jungheinrich's answer to used material handling trucks. And they count among the best of the market. Our high-end refurbishment process according to the 5-star principle ensures that each vehicle is restored to a technically and visually perfect condition, fulfilling the highest safety and sustainability standards – "as Jungheinrich as new".

With our zincked models you get extremely resistant trucks which can brave the toughest environments. Where chemicals, salt or water can attack a truck it can be difficult to prevent. Our zincked JUNGSTARS fits perfectly for transport and stacking tasks:

At the harbour

In the food industry

In the chemical industry

JUNGHEINRICH

**Two methods.
One objective.
No corrosion.**

Zincked Jungheinrich JUNGSTARS.

JUNGHEINRICH

Zincked Jungheinrich JUNGSTARS.

Our sustainable answer
for wet and aggressive conditions.

Hot-galvanizing

JUNGSTARS gets their pervasive protection against corrosive influences with a 450 °C hot zinc bath. This technique is used for all trucks without mast. Due to the high temperatures the mast would warp. Painting is not part of this process.

Flame-galvanizing

This method is usually used for bigger trucks with a mast – however other trucks can be zincked with this process as well. The procedure is more complex and requires the truck to be painted on completion.

Our cold store package

When it comes to Arctic cold conditions both galvanizing methods are insufficient. For this extreme environment we offer a special cold store package which ensures a fully efficient operation in low sub-zero temperatures by the exchange of certain truck parts, tubes, oils and fluids.
